

# **Overworked? Burnt out? Striving for better balance? Albert could be your solution.**

University staff are busier than ever, with more demands and no more time to meet them. Artificial Intelligence (AI) has made life as an educator more complex, but it could also be the key to saving you time planning, delivering, and marking your students' work.

## What are the risks?

Most AI tools are insecure, unregulated, and unspecialised.

They require a lot of trial and error, can be unpredictable, and in some instances your work could be used or replicated without permission.

There are also risks that students may submit work written entirely using AI – something that threatens educational outcomes and makes sophisticated assessment more important than ever.

## Why is Albert different?

Albert has been built for universities. It is a powerful tool that will help educators, researchers and students respond and benefit from the latest in AI.

Upload your assessments, exemplar and assessment criteria rubrics, and Albert will do the rest.

**Albert will save the average educator  
50% to 80% of their marking time.**

## How does it work?

Students and researchers can upload articles, papers and references, create automatic summaries or paraphrase, build study notes or podcasts based on readings, and be assisted while writing parts of an essay or report using AI.

For educators, Albert shows you what parts of an essay or report have been AI-generated, what new and novel ideas have been generated, and how the work submitted aligns with course rubric grading criteria. Albert produces a grading range to help assessors compare, and tools to help your teams with course design and delivery.

With an array of AI engines, Albert has them compete for the most balanced and unbiased results. This turns what has traditionally been a subjective process into confident, fair and fast assessment.

## Focus on what matters

With Albert you can concentrate on what gives you joy; the people around you and the ways you are improving the world. Spend time building better courses, focusing on ideas and concepts, collaborating with your colleagues, and empowering any student to breakthrough.
