

# Searching for a breakthrough? Striving for impact? Overworked? Albert could be your solution.

Researchers are busier than ever – submitting grant applications, teaching, marking, lecturing, publishing papers, conducting research...

Artificial Intelligence (AI) has the potential to change the world, and Albert harnesses it to eliminate admin - save time, improve efficiency, connect to your peers, and reach breakthrough sooner.

## How can Albert help?

Automate your administration with your new assistant, colleague, and collaborator: Albert.

---

**Reduce admin** With a single click, upload notes, articles, papers and references to your secure AI locker. Then have Albert visualise and map your field, write summaries and paraphrase, create a podcast based on your research notes, or draft up parts of your paper or report in seconds.

---

**Better research** Albert can identify the best research topics or gaps in your field, flag potential sources of funding, introduce partners and collaborators, and assess the credibility and strength of your sources.

---

**Save 50-80% of your research time, focus on what matters and say hello to Albert.**

Turn the time you spend reading, summarising, citing and understanding research into time to think, imagine, test, collaborate and explore.

### How does it work?

Most AI tools are insecure, unregulated, and unspecialised. They are unpredictable and require a lot of trial and error. In some instances your work could also be used or replicated without permission.

Albert has been built for researchers. Using a series of unique AI engines in a 'competitive array', they compete with one another to give the best result and will continually evolve based on your feedback. Growing with you, Albert is less biased and more ethical than other AI tools.

Albert is secure and confidential, none of your data is shared outside of the platform as Albert only uses your data and inputs to improve your unique experience.

Albert is also more accurate than other research and AI tools, recognising

tables, graphs, diagrams and images, understanding them in context; Albert connects all your research information in a Knowledge Network.

### Focus on what matters

Change the world. Focus on ideas and concepts, collaborating with your colleagues, and edging closer to your next breakthrough.

**Together we are reinventing research. Join us and say hello to Albert.**
